# Extending an RS485 data line with a wireless router

Installing Net2 over a wireless Local Area Network

A Net2 RS485 dataline can be configured to connect to the server PC across a wireless LAN. The Net2 TCP/IP interface will be connected to a wireless ethernet adaptor, allowing communication to a wireless base station connecting to the PC via a switch.

Please refer to the manufacturers instructions for how to configure the wireless adaptors.

Wireless Ethernet Adaptor

Wireless base station

Switch

PC running full Net2 software with server

In the Net2 Server Configuration Utility the Net2 TCP/IP interface should be detected and an IP address set for it.

You may also refer to -: Ins-30001 Net2 485 TCP/IP Ethernet Interface < http://paxton.info/1369 > for further information on how to install and configure the Net2 Ethernet interface.

Please contact your IT Administrator before installing this product.
