

Product Security Policy

Paxton is committed to the safety and security of our products and services.

Although we design in security measures and test our products during development, the cyber security landscape is ever evolving. In order to keep pace, we make continuous security improvements on our products and conduct security tests on a periodic basis to ensure the ongoing resilience of our product range.

For our customers' protection, Paxton does not disclose, discuss, or confirm security issues until patches or releases are available.

In keeping with the above, we advise our customers to install the latest software releases to remain as secure as possible.

Paxton Security Updates Policy

All Paxton products receive software security updates for at least two years after their last date of manufacture (subject to technical and other limitations). After that time, we strive to provide software security updates for as long as we can.

The table below shows software security update periods for Paxton products that currently fall within this 2-year support period. The table also shows any obsolete products where the support period is under 2-years or fully expired.

Product range	Product name	Serial number range	Software updates to end of
Net2	Pro and Lite software	All	2027*
